

My wife and I drive truck from the Midwest to all Western states. We rely on our XM radio for information on weather and traffic conditions in cities like Los Angeles long before we are in range of local stations. We also can select any kind of programming or music that we desire and never lose the station. It gives us the freedom of choosing what we wish to hear, not the same 20 songs some program director thinks we all want to hear. Please reject petition 04-160. The safety benefits of being able select routes through and around traffic hazards in all major cities by going one station instead of searching all the am stations is tremendous. Thank You
